Travinci Ai

TRAVINCI CRM OS

Run your whole business from one app.

Leads, quotes, trips, payments and your team in one system, with **AI employees** working at every step. No AI employee can move money.

- One customer record
- AI employees
- You stay in charge

ALSO ON THE LINE
Travinci One

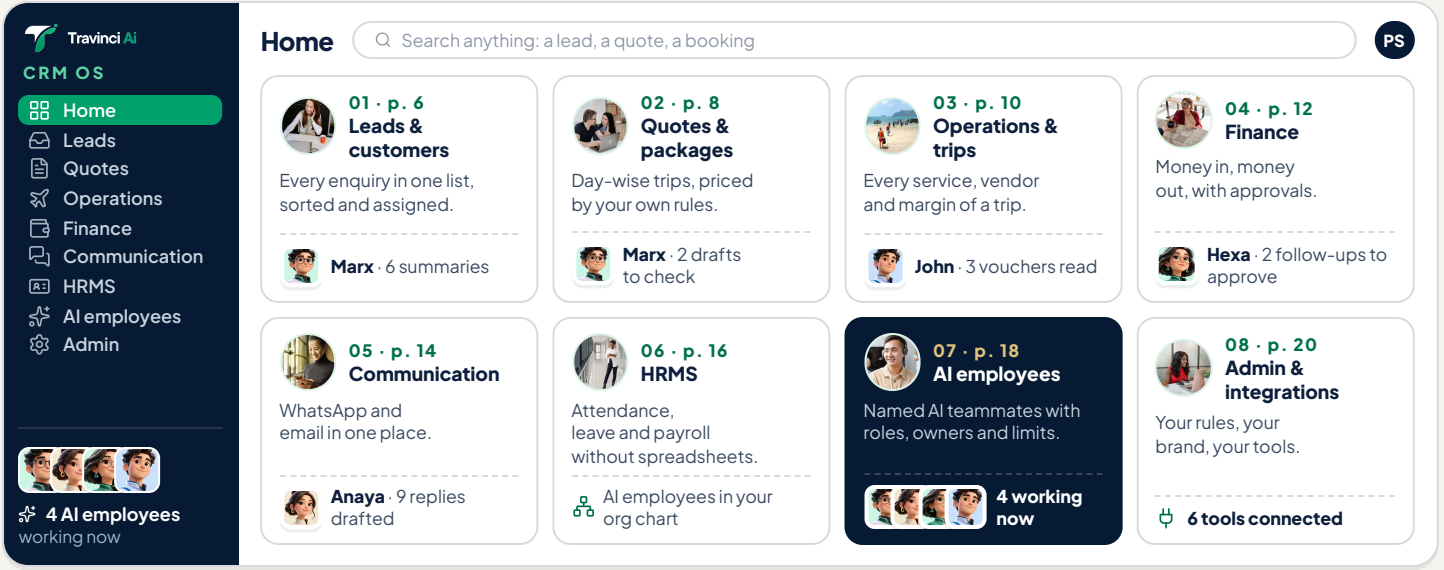

ALSO ON THE LINE
Marketing BOS

YOU ARE HERE
CRM OS

PLATFORM AT A GLANCE

Everything your business runs on. In one system.

Eight connected areas share one customer record, one team and one set of rules. Start with the module you need today and add the rest when you grow.

8	40+	2,500+	5
connected areas	automatic background jobs	system actions (APIs)	AI engines to choose from

AI employees work inside every module

They read, draft, remind, call and sum up. No AI employee can move money.

OpenAI · Anthropic Claude · Google Gemini · DeepSeek · Travinci LLM

CRM OS

HOW IT ALL CONNECTS

Four lines. One network. Nothing typed twice.

Sales, money, trips and people each run on their own line. Where two lines meet, one module hands its work to the next by itself: a payment starts the trip and updates what is owed, and your team structure decides who gets each lead. After the trip, if you switch it on, reviews and complaints are routed for you.

Line 1 · Sales Leads, quotes · p. 6–9

Line 2 · Money Finance · p. 12–13

Line 3 · Trip Operations · p. 10–11

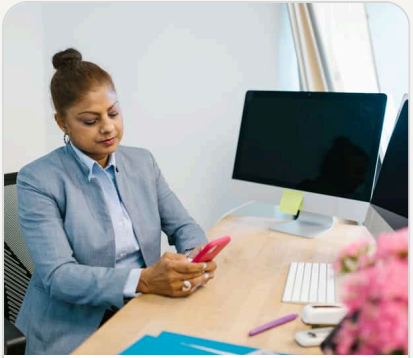

Line 4 · People HRMS · p. 16–17

Left pages: what each module is, and its AI employee. **Right pages:** how it works in the app.

CRM OS

Meet your AI team. Priya stays in charge.

AI employees come built into CRM OS and work next to your staff, each with a name, a job and limits, just like hiring. They do the busywork inside the modules; no AI employee can move money, and risky AI actions wait for a person.

A PERSON · IN CHARGE

Priya

Sales Manager

- Approves money and anything risky, in one tap
- Sees every AI action in the log
- New AI employees only propose at first

Marx

Sales Executive

Leads · Quotes
p. 6–9

- Writes a one-look summary and the next step on every lead
- Drafts day-wise quotes for your team to check
- **Asks before he calls a customer about a quote**

Anaya

Personal Assistant

Communication
p. 14–15

- Can answer your calls, recognise callers and open a lead
- Reads every email and drafts the reply
- **Transfers the call to a person in business hours**

Hexa

Finance Assistant

Finance
p. 12–13

- Follows up payment links by phone, once a person approves
- Reads the numbers, so she can answer questions
- **Can never move money: a person approves every payout**

John

Service Coordinator

Operations & trips
p. 10–11

- Reads supplier vouchers into the booking
- Reads e-tickets too, for a person to confirm
- **A person confirms what he read from a voucher**

Every AI employee ✓ Has a name, a job and limits ✓ Can only read on calls ✓ Never says an unchecked price ✓ Keeps quiet hours and do-not-call lists ✓ Logs every action

CRM OS

AI IN EVERY STEP

AI does the busywork. Your team makes the calls.

From the first enquiry to the last review, an AI employee helps at each step. No AI employee can move money.

YOUR TEAM

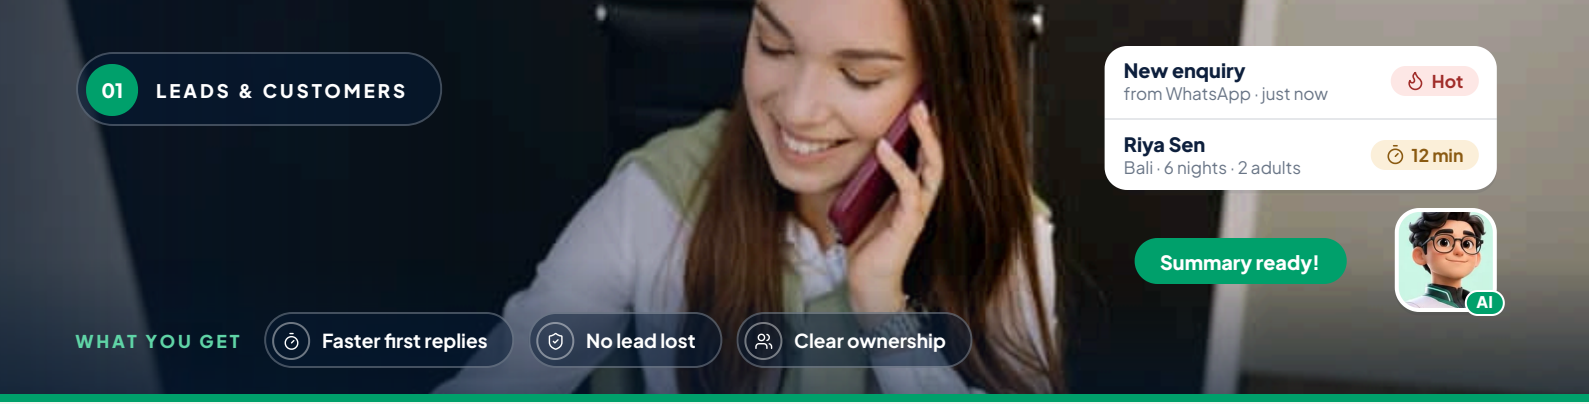

1	2	3	4	5	6	7
An enquiry arrives WhatsApp, ads, website, phone, walk-in	**The lead is assigned** Sorted hot, warm or cold	**The customer is contacted** Calls, WhatsApp, email	**A quote is built** Day-wise, priced by your rules	**The trip is booked and run** Services, vendors, documents	**The customer pays** Card, UPI, pay links	**Feedback comes in** Reviews and complaints

AI NEXT TO THEM

1	2	3	4	5	6	7
Anaya Answers the call and opens the lead p. 18	**Marx** Writes a one-look summary and the next best step p. 6	**Marx** The voice bot calls, records and sums up the call p. 6	**Marx** Drafts the full quote; your team checks and sends p. 8	**John** Reads supplier vouchers and drafts vendor emails p. 10	**A person** **Only a person approves money. AI never pays.** p. 12	**John** Sums up guest feedback for managers p. 10

AI employees work between every step: callbacks, follow-ups, payment reminders and scheduled tasks, by playbooks you set. Some AI features are switched on per company.

CRM OS

Every enquiry in one list. No lead goes cold.

The problem: enquiries arrive on WhatsApp, ads, your website and the phone, and the ones nobody answers in time go cold. **The fix:** every enquiry lands in one list, is sorted hot, warm or cold, and goes to the right person; switch on a reply clock to time the first answer.

CRM OS

WHAT'S INSIDE

Lead capture
Meta and Google ads, WhatsApp, website, calls, walk-ins and Excel import.

Lead lifecycle
Calls, quotes, payments, bookings, tasks and journey file on one record.

Smart segregation
Hot, warm and cold, with a priority score that explains itself.

Customer profiles
Found or created for every lead; active and inactive customers.

Assignment
Shared out to your team, with every handover logged.

Voice bot
AI calls that are recorded and summed up on the lead.

A DAY WITH IT

10:02
Riya asks about Bali on WhatsApp. A lead is made with her number.

10:03
It is marked hot and given to Priya. Her reply clock starts.

10:09
Priya calls. Marx's summary tells her what Riya wants.

AI EMPLOYEE HERE

Marx

Sales Executive
Reports to Priya

DOES ON HIS OWN

- A one-look summary and the next best step on every lead
- Asks a person before he calls a customer

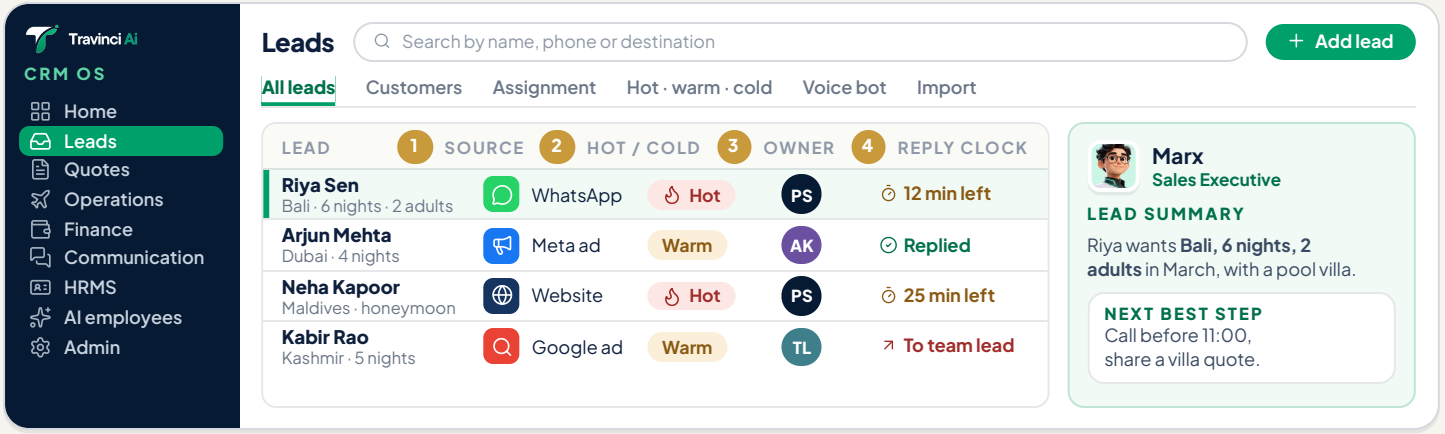

WAITS FOR A PERSON

- Discounts, payments and bookings: on a call he can only read
- Any price or availability that is not yet checked

WHO USES IT Sales team · Team leads · Managers · Owners

How leads work.

Screens show example data

1 Comes in from anywhere

Ads, WhatsApp, your website, calls and walk-ins land in one list. A returning customer's profile is found; a new one is made.

2 Sorted hot, warm or cold

Each lead gets a temperature, so your team knows who to call first. Calls, quotes and payments collect on one record.

3 Given to the right person

Leads are shared by your team structure, or by hand. Every handover is logged.

4 A reply clock starts

A time limit for the first reply. If nobody acts in time, the lead moves up to a team lead or manager instead of going cold.

IN DETAIL · FOR TECHNICAL TEAMS

No duplicates
A phone number that matches an open lead is flagged before a second lead is made.

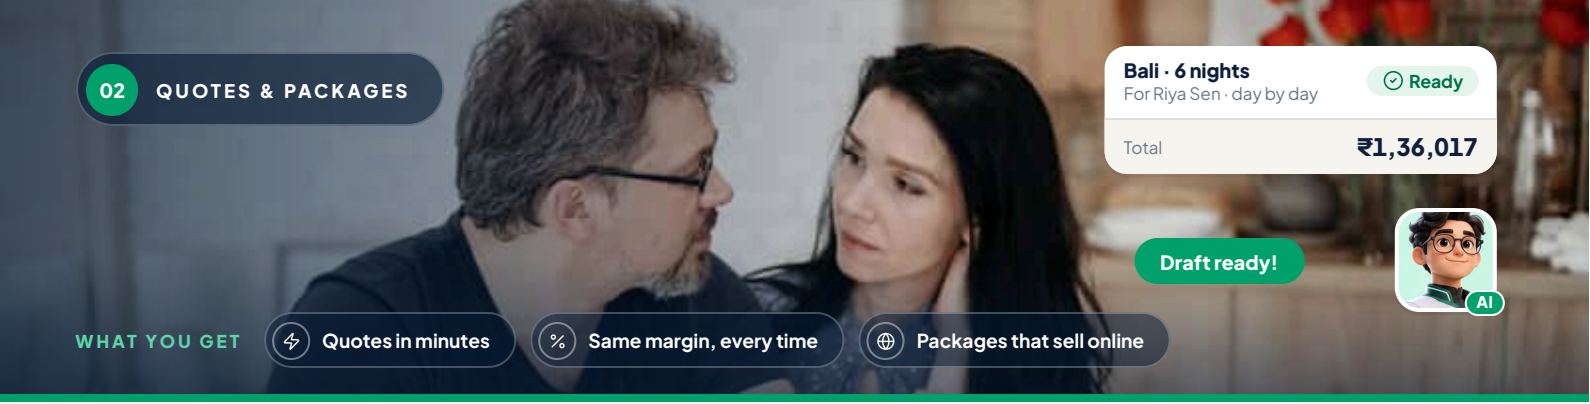

Business hours, if you choose
When the clock is on, it can count business hours only.

Automatic sharing
When switched on, leads go to the people whose intake is on. Overrides need a reason.

Proof, not notes
Notes and edits never stop the clock; which real contacts count is set by your company.

Two clocks, if you want them
When switched on: one to accept the lead, one for the first action, with warnings.

Quote-ready check
The key trip details must be filled in before a quote can be made.

Their dream trip, priced in minutes.

The problem: a full trip quote takes hours of copying prices, and every salesperson adds a different margin. **The fix:** build it day by day from the lead; the price works itself out from your own margin and tax rules, and it goes out in minutes.

WHAT'S INSIDE

Quote builder
Pick the lead, then add hotels, flights, activities and visa.

Day-wise itinerary
Every day planned with stays, transfers and experiences.

Pricing and tax rules
Central markup, GST and TCS set by your company policy.

Quote templates
Branded PDFs and links that look like your company.

Packages
Ready trips with category, type and a day-by-day plan.

Website publishing
Packages go live on your website after a 2-step approval.

A DAY WITH IT

- **11:00** Marx's draft of Riya's Bali quote is waiting for Priya.
- **11:06** Priya swaps one hotel; the price updates by itself.
- **11:10** The quote goes out on WhatsApp. Riya opens it at 11:14.

AI EMPLOYEE HERE

Marx

Sales Executive
Reports to Priya

DOES ON HIS OWN

- Drafts the full day-wise quote from the lead
- Uses real prices and your margin rules

WAITS FOR A PERSON

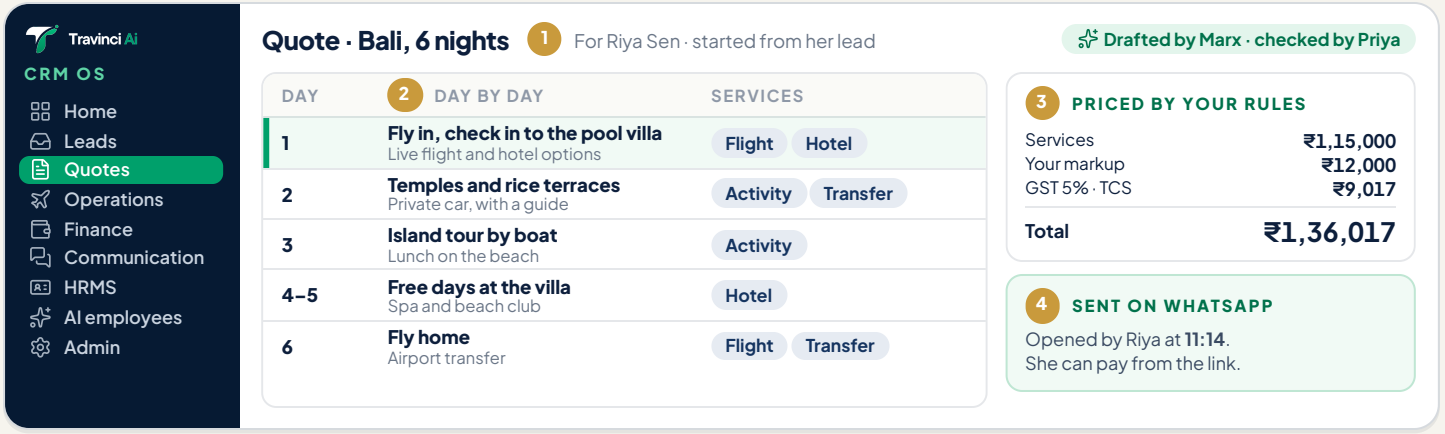

- Your team checks every quote before it goes out
- Packages go live on your website only after a 2-step approval

WHO USES IT Sales team · Product team · Managers

CRM OS

How quotes work.

Screens show example data

1 Start from the lead

Open the lead and start a quote: dates, travellers and destination are already filled in. Or begin from a package.

2 Build it day by day

Add flights, hotels, activities, transfers and visa to each day. Live flight and hotel options are searched inside.

3 Priced by your rules

Your markup, GST and TCS settings apply by themselves. Ready templates keep every quote looking like your brand.

4 Send it, see it opened

Send by email or WhatsApp and see when the customer opens it. They can pay straight from the link.

IN DETAIL · FOR TECHNICAL TEAMS

Live flights and hotels
Real-time flights and hotels; activities, transfers and visas from your own lists.

Tax worked out for you
GST and TCS come from your quote settings, worked out for you.

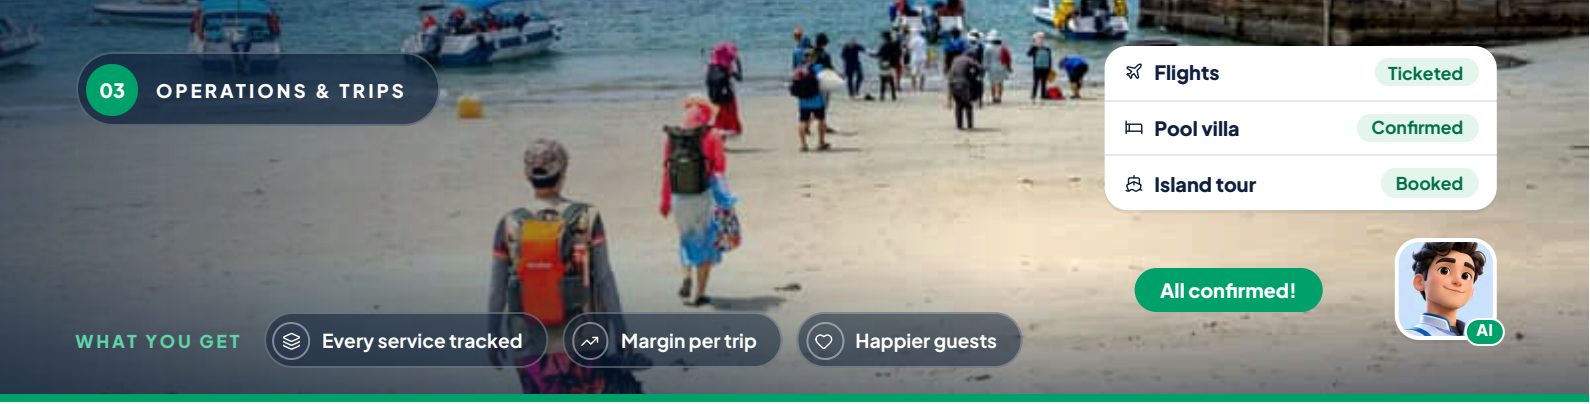

Smart day planner
Keeps each day's pace in budget and never repeats an activity in a day.

Fares rechecked
Prices are checked again before the customer pays.

Cost and price kept apart
Cost and selling price kept apart; markup starts from your company default.

Tracked link + PDF
You see when the quote is opened; payment turns it into a booking.

CRM OS

Every trip looked after.

The problem: once a customer pays, the trip lives in emails and spreadsheets, and a missing voucher or visa is found too late. **The fix:** a paid quote opens the trip with every service listed; vendors, documents and the journey stay on one record.

WHAT'S INSIDE

Services
Flights, hotels, transfers, activities and visa for every trip.

Customer dues
What each customer still owes, and when it is due.

Documents
Passports, visas and ID proofs collected by secure link.

Vendor management
One action emails every vendor about its services, then payments.

Profit per service
The margin on every service and on the whole trip.

Journey file
The full travel record, journey updates and feedback.

ONE TRIP, START TO END

Mon
Riya pays. Her trip opens with flights, hotel, transfers and visa.

Tue
The vendors confirm. Her passport copies arrive by link.

After
With feedback switched on, Riya rates the trip and is asked for a review.

AI EMPLOYEE HERE

John

Service Coordinator
Operations team

DOES ON HIS OWN

- Reads supplier vouchers and e-tickets into the booking
- Reads supplier e-tickets and vouchers for a person to confirm

WAITS FOR A PERSON

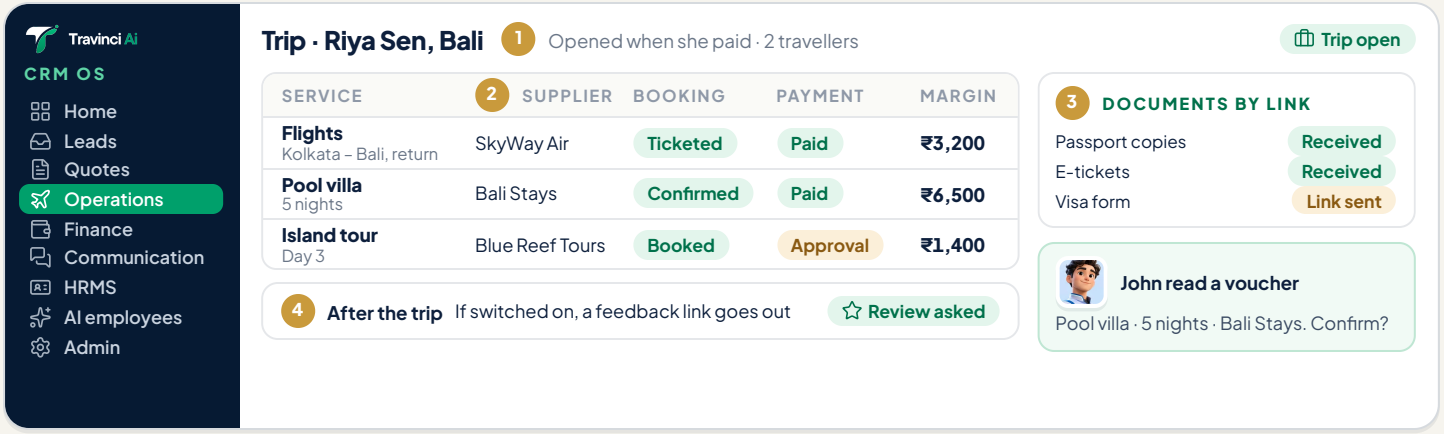

- A person confirms what he read from a voucher
- Vendor payments go to Finance for approval

WHO USES IT Operations team · Finance · Sales team

CRM OS

How trips work.

Screens show example data

1 A paid quote becomes a trip

When the customer pays, a trip opens with every service from the quote and an executive is assigned. Nothing is typed again.

2 One action, every vendor

One action emails each vendor about its own services, and you track each confirmation.

3 Documents collected

Passports, visas and ID proofs are requested by secure link. The journey file keeps the whole trip in one place.

4 After the trip, feedback

Switch on journey automation and a feedback link goes out when the trip ends; a complaint goes to an owner.

IN DETAIL · FOR TECHNICAL TEAMS

Auto-booking
Flights and hotels picked from live inventory book themselves once paid and details are complete.

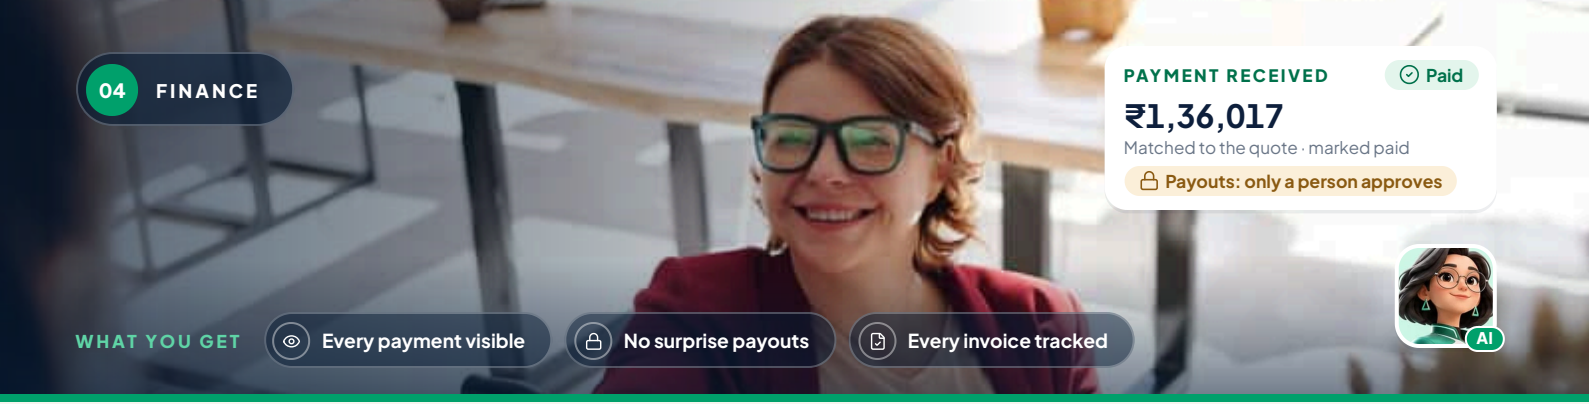

19-document checklist
Per trip, with secure upload links for customers and branded voucher PDFs.

Every service tracked
Each flight, hotel, transfer, activity and visa has its own supplier, booking and payment status.

Linked to Finance
Vendor payment requests go straight to the approval center.

AI voucher reading
Upload a supplier voucher or e-ticket; AI pulls out the services and a person confirms.

Recovery, when switched on
An unhappy guest opens a recovery case for an owner, with a follow-up task.

Know every payment. Approve every payout.

The problem: payments arrive in many places, books are kept by hand, and money can leave without anyone checking. **The fix:** customers pay by link, each payment lands on its quote, and no payout leaves unapproved.

WHAT'S INSIDE

Accounts
Money in and money out, all in one view.

Approval center
Payments and vendor bills wait for a person to approve.

Invoices
Tax invoices, proforma, credit and debit notes.

Expense management
Staff claims through your approval chain, then Finance.

Payment gateway
Razorpay for cards, UPI, net banking and pay links.

Books and reports
Ledger, trial balance, profit and loss, and export.

A DAY WITH IT

09:15
Riya pays by UPI. Her quote is marked paid; Finance raises the invoice.

12:30
Operations asks to pay the hotel. It waits for approval.

16:00
The finance head approves, and the payout goes out.

AI EMPLOYEE HERE

Hexa

Finance Assistant
Finance team

DOES ON HER OWN

- Follows up payment links by phone, once a person approves
- Reads the numbers, so she can answer questions

WAITS FOR A PERSON

- Every payout: she can never move money
- Vendor bills and expense claims: a person signs off

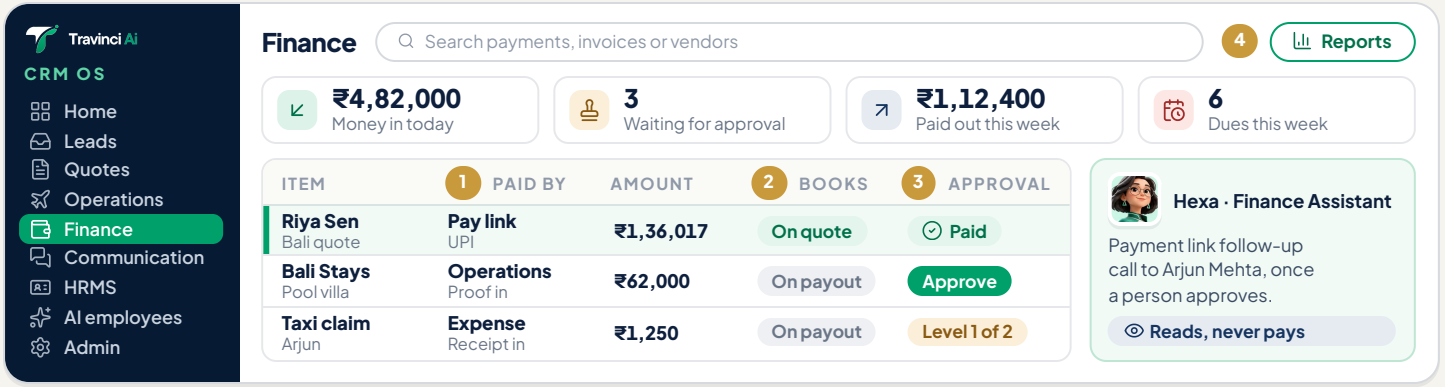

WHO USES IT Accountants · Finance head · Owners

CRM OS

04 FINANCE · IN THE APP

How money works.

Screens show example data

1 Customers pay by link

A pay link goes out with the quote: card, UPI or bank transfer through Razorpay, matched to the right customer.

2 Invoices and receipts

GST invoices with the tax split done for you; receipts Finance finalises post to the ledger.

3 Every payout approved

Vendor bills and staff expense claims go to the approval center, and are paid only after the right person signs off.

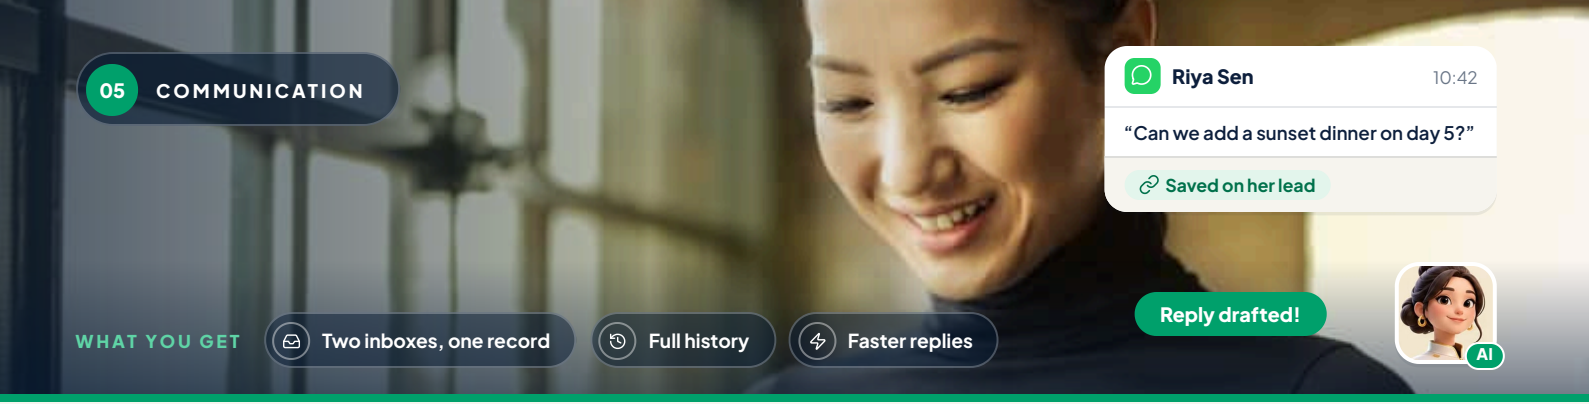

4 See all of it

Money in and out, what each trip earned, and reports you can export at any time.

IN DETAIL · FOR TECHNICAL TEAMS

- **One approval queue** — Receipts from sales and vendor requests from operations, side by side.
- **No self-approval** — Claims follow your approval chain; nobody approves their own claim.
- **Invoice and proof** — A vendor request needs its invoice; Finance records proof of each payment.
- **Payment keys protected** — Gateway keys are stored encrypted; charges run on a separate service.
- **Real double-entry books** — Chart of accounts, journal vouchers, ledger, trial balance, P&L and balance sheet.
- **Gateway view** — Razorpay transactions, settlements and payment links, inside Finance.
- **Collections on time** — Payment milestones with reminders before each due date.
- **Credit and debit notes** — Proforma, tax invoice, credit and debit notes, with the tax split done for you.

CRM OS

Every conversation in one place.

The problem: chats sit on salespeople’s own phones and mailboxes, so when someone is away, nobody knows what was said. **The fix:** WhatsApp and email each get a shared inbox, every message is saved on the right customer, and anyone can pick up.

WHAT’S INSIDE

WhatsApp inbox
A shared team inbox on the official WhatsApp Business API.

Email inbox
Gmail and Microsoft 365 mailboxes inside the CRM.

AI email reading
AI sums up and sorts incoming email.

Calls
Click-to-call, recordings and missed-call leads.

Templates
Approved messages, sent in one click.

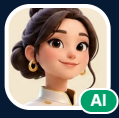

Linked to the lead
Every message saved on the right customer.

A DAY WITH IT

10:42
Riya asks on WhatsApp for a sunset dinner. The chat lands on her lead.

11:05
The hotel emails her voucher. Anaya links it to her booking and drafts a reply.

11:07
Priya checks the draft and sends it. Both threads sit on Riya’s record.

AI EMPLOYEE HERE

Anaya

Personal Assistant
Reports to Priya

DOES ON HER OWN

- Reads every incoming email, sums it up and files it on the right record
- Drafts the reply for a person to send

WAITS FOR A PERSON

- An AI-sent reply waits for approval of its exact text
- A person checks and sends every draft

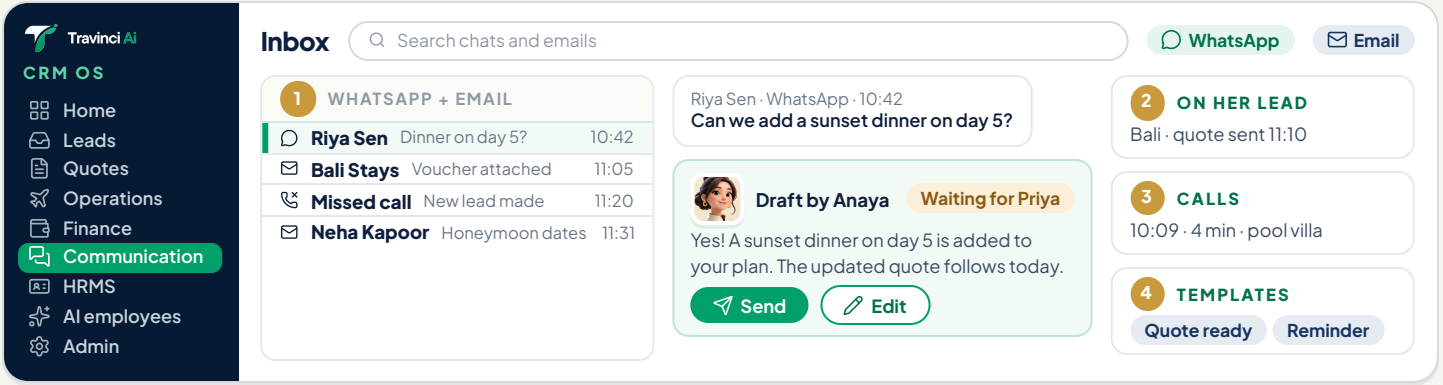

WHO USES IT Sales team · Operations · Support

CRM OS

05 COMMUNICATION · IN THE APP

How the inbox works.

Screens show example data

1 WhatsApp and email together

Connect your WhatsApp numbers and Gmail or Microsoft 365 mailboxes. Chats and emails land on the right lead.

2 On the right customer

Each message is linked to the right lead or booking by itself. Open a customer and see every conversation in order.

3 Calls on the record

Calls are logged on the lead with how they went, so the next person knows what was said.

4 Ready templates

Approved WhatsApp and email templates for quotes, reminders and updates, sent in one click.

IN DETAIL · FOR TECHNICAL TEAMS

Secure sign-in to mailboxes
Gmail and Microsoft 365 connect by secure sign-in; new mail arrives every 2 minutes.

New chats become leads
A new WhatsApp chat creates a lead, so no enquiry is missed.

Files itself
By booking reference to the booking, by email to the lead, by sender to the vendor.

Access by design
Sellers see their own mail, managers their team's; every support view is logged.

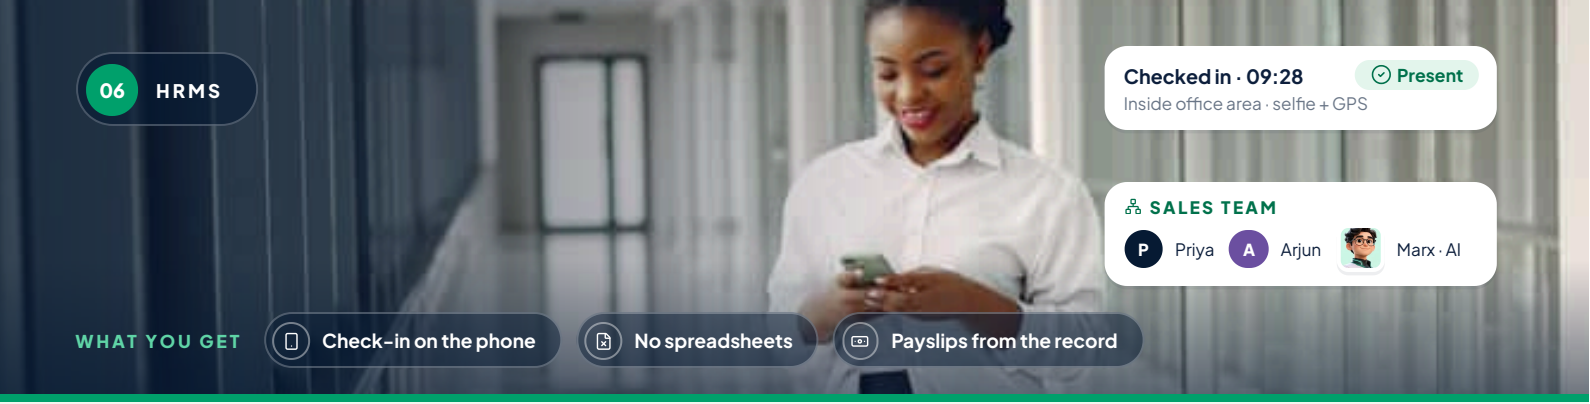

Attachments understood
Vouchers, tickets, visa documents, invoices and itineraries are read and sorted.

Missed-call leads
A missed call becomes a lead, with click-to-call back from the lead.

Approval before AI replies
An AI-sent reply waits for approval of its exact text.

Team chat and alerts
Real-time notifications, staff chat, announcements and video meetings.

CRM OS

Attendance and payroll. No spreadsheets.

The problem: attendance, leave and salaries live in registers and spreadsheets, and month end means copying numbers. **The fix:** staff check in on their phone, managers approve leave from anywhere, and payslips come from attendance and leave.

WHAT'S INSIDE

Employee management
Profiles, departments and a 5-step onboarding.

Team management
Your hierarchy: who reports to whom.

Attendance
Selfie + GPS check-in for office and field teams.

Leave management
Requests, approvals and leave balances.

Roster
Shifts, weekly offs and rosters.

Payroll
Salary, payslips and statutory deductions.

A DAY WITH IT

09:28
Priya checks in at the office with a selfie.

11:00
Arjun asks for Thursday off; his team lead approves it on the phone.

Month end
Payslips are ready from attendance and leave.

AI EMPLOYEES HERE

In your org chart

ON THEIR OWN

- Can sit in your org chart, with a manager or team
- Show in your team structure, like staff

WAITS FOR A PERSON

- Attendance and payroll stay out of their reach
- HR changes go through approval levels, and are logged

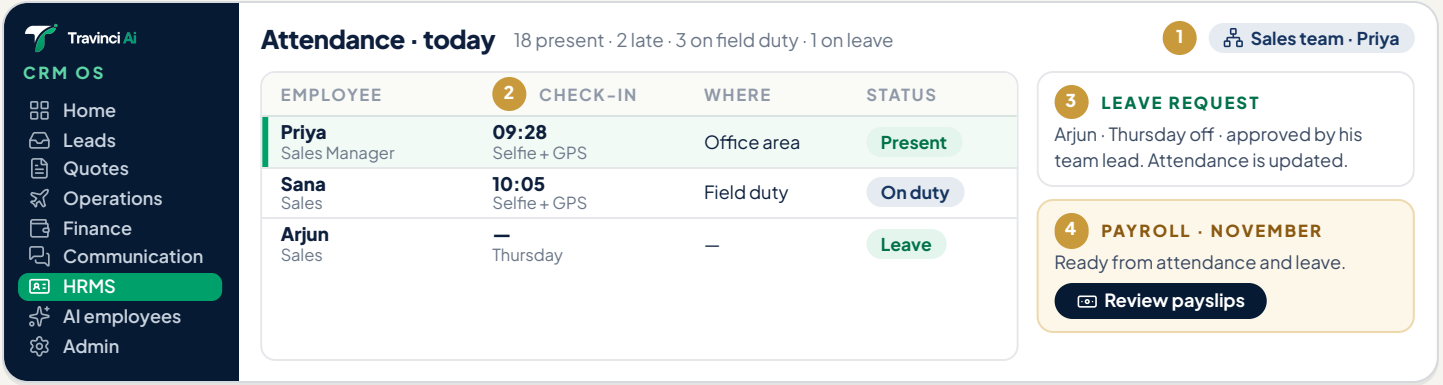

WHO USES IT HR team · Managers · Every employee

CRM OS

06 HRMS · IN THE APP

How HRMS works.

Screens show example data

1 Your team structure

Add employees, departments and reporting lines once. The same hierarchy decides who gets leads and who approves.

2 Check in on the phone

Staff check in with a selfie and GPS, in the office area or on field duty. Managers see who is in, late or out.

3 Shifts and leave

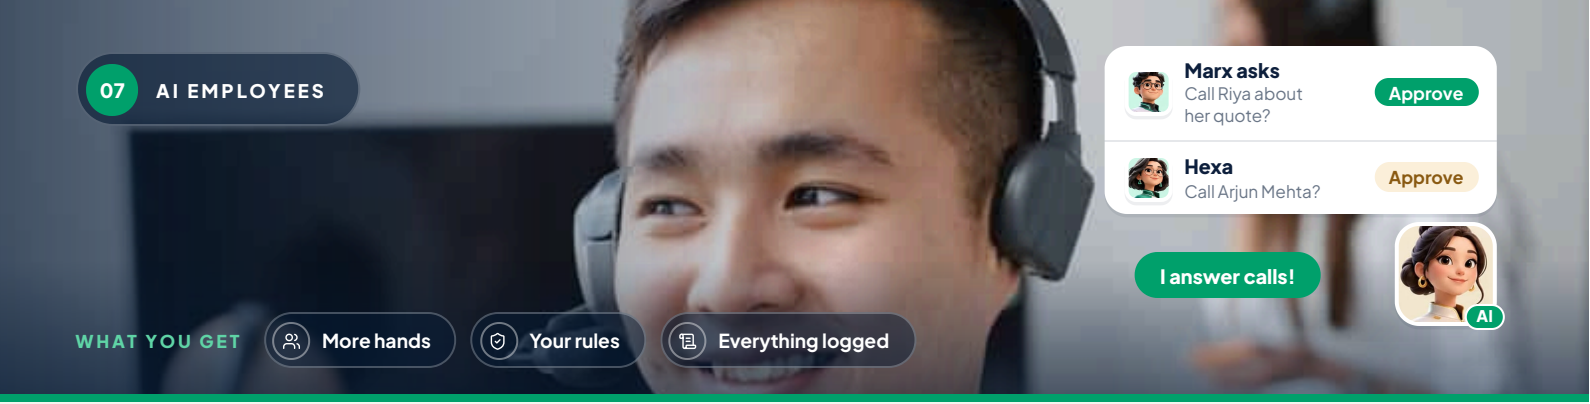

Set shifts, weekly offs and rosters. Leave goes to the right manager; approved days update attendance by themselves.

4 Payroll from attendance

Payroll is worked out from attendance and leave, so payslips are ready without anyone copying numbers.

IN DETAIL · FOR TECHNICAL TEAMS

- **Trusted attendance** — Geofence, GPS accuracy, selfie rules and device registration; offline punches sync later.
- **Maker-checker** — Approval levels with no self-approval; payslips held, released or reissued.
- **Day status by itself** — Present, half day, absent, leave, holiday or week-off, night shifts included.
- **Self-service** — Staff see payslips and requests; a manager portal never shows salaries.
- **Leave by policy** — Policies by department, grade or branch, with multi-level approval.
- **Onboarding in one sitting** — A 5-step wizard creates the employee, salary structure and login.
- **Statutory payroll** — PF, ESI, professional tax, tax regimes, bank files and full-and-final settlement.
- **Training** — Courses with quizzes and certificates for your team.

Hire AI teammates. Keep control.

The problem: callbacks, follow-ups and reminders slip when your team is busy, and general AI tools do not follow your rules. **The fix:** AI employees built into CRM OS work next to your staff, each with a name, a job and limits; anything risky waits for a person.

WHAT'S INSIDE

AI employees
Create and manage AI staff with a name, a role and limits.

Tasks
Schedules, callbacks, follow-ups and reminders.

Playbooks
Step-by-step rules for each situation.

Knowledge Hub
Your policies and guides for the AI to use.

Voice AI
Can answer and make calls, when switched on.

Approvals and log
Risky actions wait; every action is recorded.

A DAY WITH IT

09:00
Anaya answers an incoming call and opens a lead for the caller.

11:30
Hexa asks to call Arjun Mehta about his payment link.

15:00
Marx asks to call Riya about her quote. You approve in one tap.

AI EMPLOYEES HERE

Your AI team

ON THEIR OWN

- Answer and make calls, with a written summary on the lead
- Callbacks, follow-ups and reminders, by your playbooks

WAITS FOR A PERSON

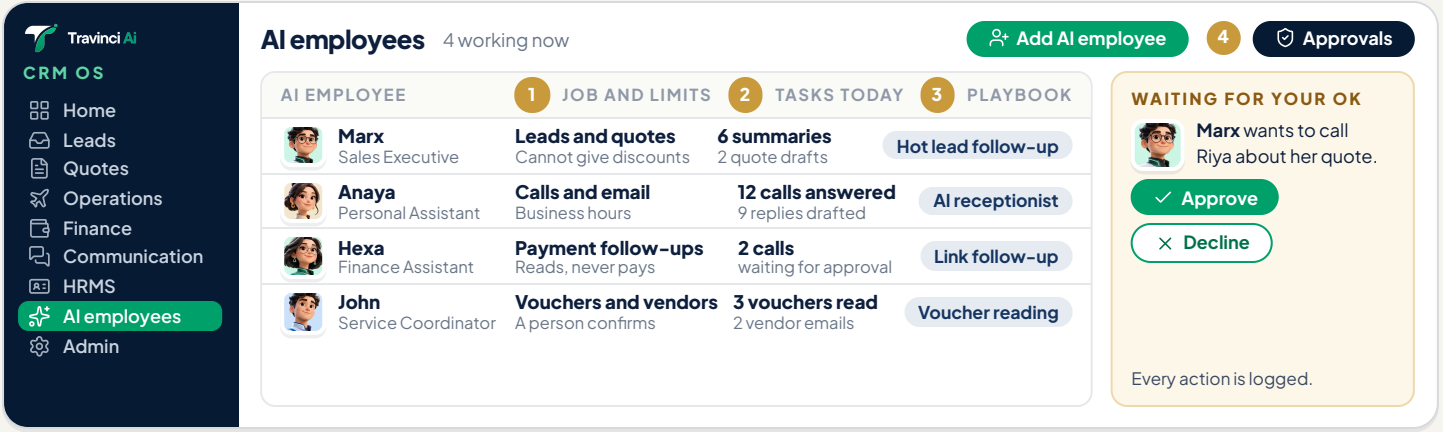

- Risky actions wait for your approval
- New AI employees only propose at first

WHO USES IT Owners · Managers · Sales team

CRM OS

How AI teammates work.

Screens show example data

1 Give them a role

Create an AI employee with a name, a job and clear limits, like hiring staff. Choose the customers and actions they touch.

2 Give them tasks

Callbacks and follow-ups go on their schedule. They work through the list and report on the lead.

3 Teach them how

Playbooks set the steps for each situation. The Knowledge Hub gives them your policies and guides.

4 You stay in charge

Risky actions wait for your approval, every action is logged, and new AI employees only propose at first.

IN DETAIL · FOR TECHNICAL TEAMS

AI receptionist
When switched on, answers calls, recognises callers, captures the enquiry and transfers.

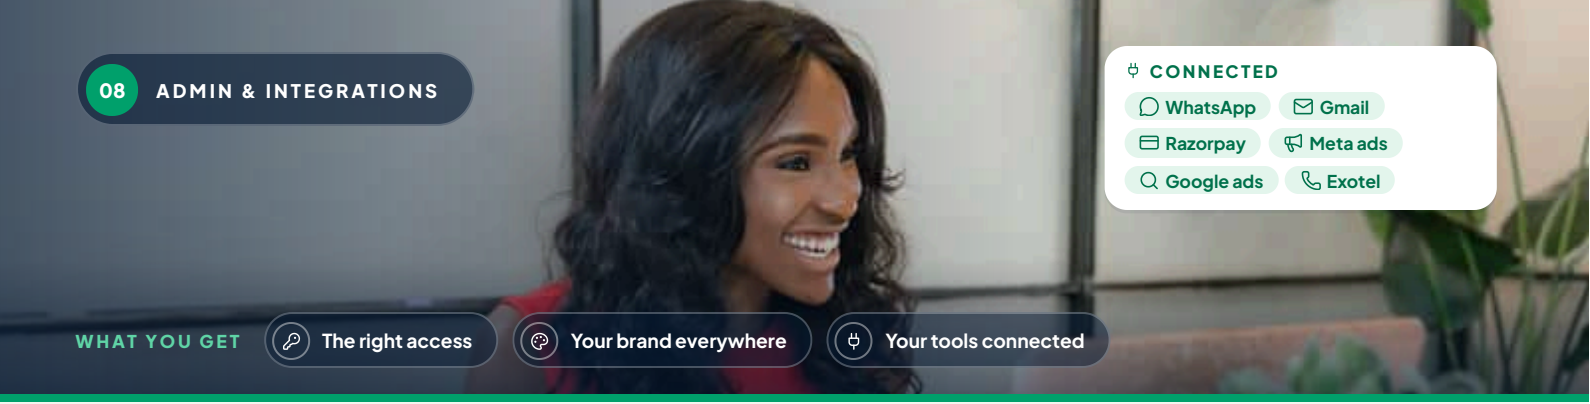

Read-only on calls
On a call the AI can read facts, never edit, pay, book or give discounts.

Every call written down
Recorded, transcribed and summed up on the lead: needs, objections and next steps.

Respects quiet hours
Consent, do-not-call lists and quiet hours are checked before every call.

Never makes things up
A guard blocks unchecked prices, availability or hotel claims before they are spoken.

Budget and limits
A daily AI budget and a per-minute limit per company.

08 ADMIN & INTEGRATIONS

CONNECTED
WhatsApp · Gmail · Razorpay · Meta ads · Google ads · Exotel

WHAT YOU GET — The right access · Your brand everywhere · Your tools connected

Your rules. Your brand. Your tools.

The problem: every company works its own way, and software that ignores your approvals, taxes and brand gets worked around. **The fix:** set access, approval chains, tax and pricing rules and your logo once, then connect the tools you already use.

WHAT'S INSIDE

User management
Invite, activate and retire users.

Permissions
Access by department or by person.

Company rules
Approval chains, pricing and tax settings.

Expense approval chain
Who approves which claims, level by level.

Branding
Your logo and details on every document.

Integration hub
Your connected providers, keys and switches in one place.

GETTING STARTED

First
Your admin adds the team and sets who can see what.

Next
WhatsApp, Gmail, Razorpay and your ad accounts are connected.

Then
Leads arrive on their own, and every rule is already in place.

AI EMPLOYEES HERE

Set up like staff

ON THEIR OWN
- Use the AI provider you connect: OpenAI, Claude, Gemini or DeepSeek
- If one provider fails, the next takes over

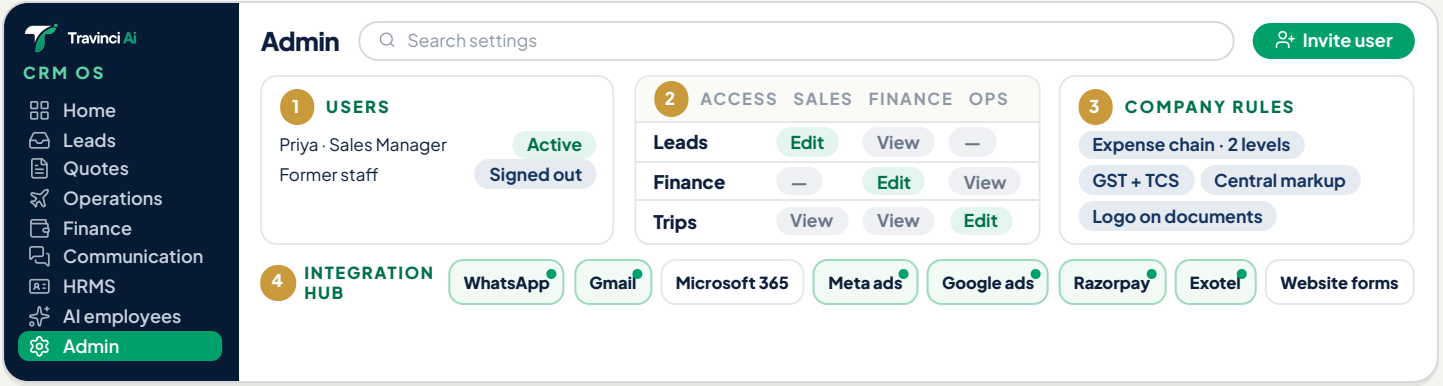

WAITS FOR A PERSON
- Roles and limits are set by your admin
- Every AI decision is in the audit trail

WHO USES IT Company admin · Owners · IT team

CRM OS

How setup works.

Screens show example data

1 Users and access

Invite staff, activate them, and switch them off when they leave. Passwords can be reset in a click.

2 Permissions that fit

Give access by department or by person, so each role sees and does only what it should.

3 Your company rules

Approval chains for expenses, your pricing and tax settings, and your logo and details on every document.

4 Connect your tools

Meta and Google lead ads, WhatsApp, Gmail, Microsoft 365, Razorpay, Exotel and your website forms.

IN DETAIL · FOR TECHNICAL TEAMS

Company isolation
Every record belongs to one company; another company's data is never shown.

Full audit trail
Approvals, AI decisions, HR changes and access are all logged.

Layered permissions
Sign-in, company, module, role and feature; a per-user block always wins.

Your AI, your order
Pick your AI providers; if one fails, the next takes over.

Secure sign-in
Optional emailed one-time code, limited attempts, and sessions you can end at once.

Sessions ended at once
Sign a user out of every device the moment they leave.

Encrypted keys
Integration keys and tokens are encrypted and masked.

Your own sign-in link
Each company signs in through its own link; a session can't cross companies.

YOUR QUESTIONS, ANSWERED

What every buyer asks us. Straight answers.

Does it fix my problem?

If leads go cold, quotes take hours or payroll lives in spreadsheets: yes. Each module spread shows how.

Can I buy only what I need?

Yes. Start with one module. The rest switch on when you grow, on the same customer record.

Will it work with my tools?

WhatsApp, Gmail, Microsoft 365, Meta and Google ads, Razorpay, Exotel and your website forms.

p. 20

Who controls the AI?

You do. No AI employee can move money, risky AI actions wait for a person, and every AI action is logged.

p. 18

Is my data safe?

Yes. Every record belongs to your company only, keys are encrypted, and every sensitive action is logged.

p. 23

Will it fit how we work?

Yes. Roles, approvals, pricing, taxes and branding are set per company.

p. 20

Who will I deal with?

One in-house team that builds, connects and supports it, and scopes any custom work with you.

p. 23

Ask us anything at the stand.

We show it on your own enquiries, quotes and team. Book a demo on the back cover.

Why growing businesses choose Travinci.

One system, not five tools
Leads, quotes, trips, money, people and email on one customer record. No copying between apps.

AI employees, not AI add-ons
AI that calls, drafts, reads and follows up, with roles, playbooks and approvals like staff.

You stay in control
No AI employee moves money, risky AI actions wait for a person, and every step is logged.

Accountability you can see
Switch on reply clocks, escalation and hand-back, measured in business hours.

Fits your business, anywhere
Your rules, roles, approvals, taxes and branding are set per company. Travinci adapts to how you work.

Start small, grow
Begin with one module. The same in-house team builds your custom integrations and apps.

SAFE BY DESIGN

Company isolation
Every record belongs to one company; other companies never see it.

Layered permissions
Company, module, role and feature; a per-user block always wins.

Encrypted keys
Integration and payment keys are stored encrypted and masked.

Full audit trail
Approvals, AI decisions, HR changes and sensitive views are all logged.

No self-approval
Nobody approves their own expense claim or payroll change.

Governed automation
Every scheduled job passes a central check; Travinci can stop them all at once.
